Summary

Associate Product Manager for SuperInvesting, an AI equity research platform covering 5,000+ Indian stocks, with a background in AI engineering. Cut AI cost per question by 90% while usage tripled; own LLM evaluation, AI cost and product analytics with a team of 8.

Education

Thapar Institute of Engineering & Technology, BE Computer Science & Business Systems 2022 – 2026

Experience

Associate Product Manager, SuprTrading Fintech (Super Trading App) – Chandigarh Jun 2026 – Present

- **Cut AI cost per 1,000 questions by 90% ($48 to $5)** while monthly AI questions tripled (29K to 90K). Traced a 1.9x spend spike to a model price increase, not usage growth; made the case to replace a 7-agent architecture with a single tool-using orchestrator plus a model switch, and led launch testing.
- Lead SuperInvesting's product with a cross-functional team of 8 (engineering, design, QA, analytics), reporting to the founder and growth lead. Own the weekly business review and built **cohort usage analytics** for the **Economic Times partnership**, as paid users grew from 5.4K to 12.8K and weekly active users from 2.1K to 6.4K.
- **Redesigned customer support end to end**, replacing a one-way "report a problem" form: a self-serve help centre (6 topics with English and Hindi video guides), screenshot attachments, two-way ticket threads users can reopen, and AI ticket analysis for the support team.
- Designed **SCOPE**, an internal AI stock-scoring CLI, and drove the team to build it: red-flag screening, sector rubrics and 5 investor personas for up to 8,000 companies, run locally on teammates' devices on existing AI plans, **cutting cost from about $1,000 per run to near zero**.

AI Engineer Intern, The Future University – Chandigarh Jan 2026 – Jun 2026

- **Raised AI agent eval pass rates from 21–57% to 75–100%** over 17 evaluation runs by rewriting system prompts and fixing agent handoffs across a 7-agent equity research platform.
- Built a **350+ test LLM evaluation suite** (Promptfoo) and token, cost and latency monitoring (PostHog).
- Improved the Chart and Portfolio Analysers for **5,000+ active users** through feedback-driven prompt changes.
- Built a pipeline that produced **100+ AI-generated investing short videos** with no manual editing.
- Contributed merged pull requests to open-source **Promptfoo** (#8330) and **OpenSRE** (#297).

Publications

Evaluating Financial Intelligence in Large Language Models: Benchmarking SuperInvesting AI with LLM Engines arXiv:2603.08704

- Co-author; ran the benchmark of GPT, Gemini, Claude, Perplexity and SuperInvesting on **95+ equity research questions**; SuperInvesting led on accuracy (**8.96/10**).

Projects

ResearchAgent – AI equity research agent Live | GitHub

- Writes a **6-section investment brief** on any of 5,000+ Indian stocks in **under 60 seconds** from free data sources. *Next.js, Gemini.*

PromptOps – Prompt engineering & evaluation workspace Live | GitHub

- Version, test and safely release AI prompts, with version diffs, eval suites and release gates. *React, FastAPI, PostgreSQL.*

Codebase Onboarding Agent – Repo explainer for new engineers Live | GitHub

- Maps and indexes any GitHub repo locally, so no code leaves the machine. *LangGraph, Tree-sitter, ChromaDB.*

Leadership

- **Executive Committee Head, URJA 2025** (Thapar's inter-college sports fest): led a **200+ person** team hosting 500+ athletes from 20+ institutions; participation grew **40%** year on year.
- **Executive Committee Member, Saturnalia 2024** (Thapar's techno-cultural fest): managed a **70+ member** team running 100+ events for 10,000+ participants.

Skills

Product: Product roadmap, PRDs, A/B testing, product analytics, user research, LLM evaluation, AI cost optimisation, launch testing, stakeholder management

Technical: SQL (ClickHouse), Python, TypeScript, PostHog, Promptfoo, n8n, FastAPI, React, Next.js, LangGraph
